¹ Based on all available data reported to Department of Primary Industries and Regional Development as a requirement of species collection exemptions (see <http://freshwater.fish.wa.gov.au/>), prior to most recent assessment Y = yes (recorded), and a dash (-) indicates species was not recorded. (F) = first record of a species at a site

This species **may** occur in the subcatchment as it has been recorded in both upstream and downstream subcatchments, and is known to undertake localised migrations between subcatchments

^ This species is known to move between estuarine and river environments and has been reported in upstream subcatchment(s) in this system.

Note: this species is known to reside wholly in some rivers so may no longer move through this site or this may only occur intermittently (e.g. during flooding)

* Species was observed but not caught in traps or nets
